About Me

As a dedicated Bubble developer, I am deeply passionate about creating innovative web applications with intuitive user experiences. With a strong background in web development and a keen eye for design, I thrive on transforming ideas into functional, visually appealing digital solutions. My expertise in leveraging Bubble's powerful no-code platform allows me to rapidly prototype and iterate, ensuring timely delivery of high-quality projects. Committed to staying updated with the latest trends and advancements in technology, I am eager to collaborate with like-minded professionals to push the boundaries of what's possible in web development.

Education

B.sc Geology

2018

Experience

Dev and Design

Sept 2023 – Nov 2023

I attended a bootcamp at Dev and Design for a period of 3months in which I learnt a lot about Bubble. I was taught on making responsive design, API integration and workflows on Bubble . At the bootcamp I was actively among the team who built 2 live apps

1) [Clientdorm.com](#) : This live app is a domain that helps our client take control of their business with ease. The app helps to collect data of an industry employee and also their customers thus making business transaction easier and records intact

2) [kwikinvoice.com](#) : This Live app actually simplifies the problem of generating invoice for a company. You can easily generate an invoice for a buyer with your companies logo and also determine the currency it will be in . Also you can add the tax for the product on the invoice , all this with simplicity as it will only take a few minute meaning it is highly efficient.

I also built some test version apps :

1) job-creation.bubbleapps.io/version-test : This test version app is about solving problems of job application for both the company recruiting and also for the applicant. For a company looking to recruit you can visit the page and post jobs while for an applicant you can go check the page for a job you're interested in an apply and also submit your CV. This app also contain the use of Stripe's API for the payment for companies to post unlimited job.

- Skillhat Dec 2023 – Feb 2023

As the lead Software Developer I worked with a team of Product Manager, Business Analyst and Scrum Master to build an app called Techleap. This App connects a mentee to a desired Mentor. As a mentee you can schedule a date meeting your Mentor with the help of Calendly. Visit Techleap page @ <https://generativeai6.bubbleapps.io/version-test?>
